Abstract: The Clean Water Act Section 305(b) reports contain information on whether waters assessed by a state meet the state's water quality standards, and, when waters are impaired, the pollutants and potential sources affecting water quality. This information helps states and the public track progress in addressing water pollution. Section 303(d) of the Clean Water Act requires states to identify and rank waters that cannot meet water quality standards (WQS) following the implementation of technology-based controls. Under Section 303(d), states are

also required to establish total maximum daily loads (TMDLs) for listed waters not meeting standards because of pollutant discharges. In developing the Section 303(d) lists, states are required to consider various sources of water quality related data and information, including the Section 305(b) state water quality reports. Section 106(e) requires that states annually update monitoring data and use it in their Section 305(b) report. Section 314(a) requires states to report on the condition of their publicly owned lakes within the Section 305(b) report.

During the period covered by this ICR renewal, respondents will: complete their 2024 Section 305(b) reports and 2024 Section 303(d) lists; complete their 2026 Section 305(b) reports and 2026 Section 303(d) lists; transmit annual electronic updates of ambient monitoring data via the Water Quality Exchange; and continue to develop TMDLs according to their established schedules. EPA will prepare biennial updates on assessed and impaired waters for Congress and the public for the 2024 reporting cycle and for the 2026 cycle, and EPA will review 303(d) list and TMDL submissions from respondents.

Form Numbers: None.

Respondents/affected entities: States, Territories and Tribes with Clean Water Act (CWA) responsibilities.

Respondent's obligation to respond: Mandatory: Integrated Water Quality Inventory Reports (Clean Water Act Sections 305(b), 303(d), 314(a), and 106(e)).

Estimated number of respondents: 59 (total).

Frequency of response: Biennial

Total estimated burden: 3,696,243 hours (per year). Burden is defined at 5 CFR 1320.03(b)

Total estimated cost: \$243,597,191 (per year), includes \$0 annualized capital or operation & maintenance costs.

Changes in Estimates: There is a decrease of 10,944 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease is due to efficiencies gained from the use of EPA's modernized Assessment and Total Maximum Daily Load Tracking

and Implementation System (ATTAINS) database and the integration of EPA's data and information systems to better support reporting, tracking water quality protection, and restoration actions. These efficiencies streamlined water quality assessment and reporting by reducing paper copy transactions and improving electronic data exchange.
